## KEY FACTS:

By the end of Key Stage I, children are expected to recognise, name and describe the properties of 2 Dimensional shapes (2D) including: a circle, a triangle, a square, a rectangle, a pentagon, a hexagon and an octagon. The main properties the children should be able to name are the amount of edges and the number of corners.

- All circles have a circumference, diameter and radius:
- The circumference is the distance all the way around a circle.
- The diameter is the distance right across the middle of the circle.
- The radius is the distance halfway across the circle. The radius is always half the length of the diameter.
- Triangles have three sides. There are many different types of triangles
- Quadrilaterals have four sides. The group name for all 2D four sided shapes is 'quadrilaterals'.
- Polygons are shapes with many straight sides.
- Regular polygons have equal angles and sides of equal length.
- Irregular polygons have sides of different lengths.

| Name of Shape | Edges | Properties of Shape | Shape Image |
| :---: | :---: | :---: | :---: |
| Circle | 1 | I curved side |  |
| Equilateral <br> triangle | 3 | 3 equal sides <br> 3 equal angles of $60^{\circ}$ |  |
| Isosceles <br> triangle | 3 | 2 equal sides <br> 2 equal angles |  |
| Scalene triangle | 3 | No equal sides <br> No equal angles |  |
| Right-angled <br> triangle | 3 | One of its angles is a right angle <br> $\left(90^{\circ}\right)$ |  |

2I) SHAPES

| Name of Shape | Edges | Properties of Shape | Shape Image |
| :---: | :---: | :---: | :---: |
| Square | 4 | 4 equal sides <br> 4 right angles <br> A regular RECTANGLE! | $\square$ |
| Rectangle | 4 | 2 pairs of equal sides <br> 4 right angles |  |
| Rhombus | 4 | 4 equal sides <br> Opposite sides are parallel <br> Opposite angles are equal |  |
| Parallelogram | 4 | 2 pairs of equal sides <br> Opposite sides are parallel <br> Opposite angles are equal | Trapezium |
| 4 | One pair of parallel sides of <br> different lengths |  |  |
| Kite | 4 | 2 pairs of equal sides next to <br> each other <br> No parallel sides. |  |

| Name of Shape | Edges | Properties of Shape | Shape Image |
| :---: | :---: | :---: | :---: |
| Regular Pentagon | 5 | 5 equal sides <br> 5 equal corners/angles |  |
| Regular Hexagon | 6 | 6 equal sides <br> 6 equal corners/angles |  |
| Regular Octagon | 8 | 8 equal sides <br> 8 equal corners/angles |  |

In KSI, children are introduced to the term POLYGON.
They become familiar with REGULAR PENTAGONS, HEXAGONS and OCTAGONS but are also taught that any shape with a given number of sides has the same NAME as the regular example; however we call it IRREGULAR if it has different length sides and/or different angles.
